Treating Acute Injury

By Dr. John A. Haché DNM

Physical damage Paul Reimers received after being rear-ended while riding his bike. These pictures as witnessed by the newspaper Paul is holding—dated July 1st 2008.

The 3rd picture above is dated the 8th of July 2008. Paul says that he was expecting and got “an amazing recovery”. Paul owns a RITM Home device.

When Paul was rear-ended while riding his bike, he had no knowledge of what happened to him until he woke approximately 30 minutes later. In his words, he describes the event:

“I was hit by a car while cycling on July 1st and I was pretty amazed by the healing that occurred. I have attached four pictures from two angles to show the extent of what happened. I did a before and after shot showing the physical change I experienced with using Isagenix (the nutritional cleansing system that we use) when I first started on it. On the way home from the hospital I had the idea to do the same thing to show the rate of healing with the scenar. Chelle and I picked up a paper before we got home because I knew based on what we had both experienced with the scenar that an amazing recovery was possible. What I did was based on what I learned from the manuals and some experimentation on my own, so I am really excited to see what is possible with training on specific treatment protocols.”

Paul and his wife Michelle were with us on our recent training course in Hartford, Ct.
